Subject Task 1 Field Construction Plan

Kathy:

Please find attached the Field Construction plan for Task 1 at Richardson Flat. We have made revisions to the report to address the issue of potential cross contamination from areas where 500 ppm or less lead soils can remain and areas where 310 ppm or less lead soils must remain. In addition, a statement has been added to make it more clear that monitoring the cover is consistent with the RD/RA Work Plan.

If you have any questions please contact me.

I have review the completion report for Task 1 and should have it to you later today.

Thanks
